Reengage & Nurture Engine

The dormant-to-deal machine,
end to end

How ~2,150 cold, stalled and dropped prospects are systematically found, scored, sequenced and re-engaged — with a human approving every single email before it sends.

PREPARED FOR

Mel Simms · Membership Development

FROM

FOX RevOps — CEO Command Center

VERSION

Architecture brief v1.0

ISSUED

July 2026

01 / THE BIG PICTURE

One engine turns a dormant list into predictable pipeline.

FOX sits on thousands of people who once raised a hand — qualified inbounds that never closed, members who dropped, referrals that went cold. The Reengage & Nurture Engine is the system that works that back-book on purpose: it finds the right people, scores them, drops them into the right cadence, checks every message for accuracy, and hands each email to a rep to approve. Nothing is sprayed. Nothing auto-sends.

2,153

prospects in the active re-engagement pool, segmented into lanes

134

Reengage deals auto-created & live since the May 6 launch

11

owned sequences — one per segment, per rep, per cadence

100%

rep-approved send — a human clears every email

REENGAGE IS ALREADY EARNING**Where 2026 deals come from**

Re-engagement is already the **3rd-largest source** of 2026 new-business deals — and it only switched on in May. Example win: **TEAM Risk Management — Reengage — \$22,200.**

THE 2026 FUNNEL IT FEEDS**609 leads → 55 won**

9.0% win rate today, 448 still open. Every prospect the engine re-engages enters this same 8-stage pipeline at Discovery — so more at the top compounds all the way down.

WHAT THIS MEANS FOR YOU, MEL

You own the **Family Office lanes**. The engine does the finding, scoring, drafting and accuracy-checking around the clock — then lands finished, personalized emails in your queue. Your job stays where it should: **read it, approve it, send it, and take the call** when they reply.

02 / THE FLOW

How it works — one prospect, end to end.

1

ENTER Three ways a prospect enters the engine

The pool is fed continuously from three triggers — new interest, deals that go quiet, and members who lapse.

New inbound raises a hand

Deal stalls — 30 / 60 / 90 days no activity

Member drops → Closed-Lost, re-engage at T+6 months

2

CLASSIFY Score it, then sort it into a lane

A weekly scoring run stamps prospect_score and a **Tier A / B / C** priority, and the cohort logic decides which segment the prospect belongs to.

Tier A — enroll first

Tier B

Tier C

3

SEGMENT Six lanes, each a different conversation

The segment sets the message, the owner and the tempo — a member who left last year is not spoken to like a five-year-cold referral.

Cold inbound

Dropped — recent (≤24mo)

Dropped — mid (1.5–4yr)

Dropped — deep (5yr+)

Dead referral

Post-event

4

SEQUENCE An owned cadence takes over

Each lane maps to a specific Outreach sequence with a fixed touch pattern, routed to its owner by product line and country.

Mel — US Family Office

Dave — US Advisor / MFO

Miguel — everything non-US

5

GATE Stop-and-ask guardrails before every touch

Hard exclusions run before enrollment **and** on each touch: unsubscribed, engine-excluded, now a current member, or already contacted too many times → the prospect is held, deferred or surfaced — never sent to.

6

VERIFY & SEND Accuracy loop, then a human approves

Every email is grounded in the real record, run through an AI accuracy check and a confirmation pass, then staged as a **manual step** — the rep reviews and sends. The engine drafts; a person decides.

7

OUTCOME Three exits — and the best one starts a deal

Positive reply → pause → Discovery (enters the pipeline)

No reply → next scheduled touch

Opt-out / bounce → suppress & exclude

03 / THE SEGMENT ENGINE

Six lanes, eleven sequences, three owners.

Segment is destiny: it decides the message, the person and the tempo. Here is the full map, with your Family Office lanes highlighted.

SEGMENT — WHO THEY ARE	SEQ	OWNER	CADENCE	POOL	STATUS
Cold inbound — FO Qualified, raised a hand, never closed	3	Mel	3 × / 14d	—	LIVE
Cold inbound — Advisor	4	Dave	3 × / 14d	—	LIVE
Dropped — recent, FO Member left within 24 months	1	Mel	3 × / 21d	—	LIVE
Dropped — recent, Advisor	2	Dave	3 × / 21d	—	LIVE
International — any non-US	5	Miguel	3 × / 21d	—	LIVE
Dropped — mid, FO Left 1.5–4 years ago	6	Mel	4 × / 14d	~620	LIVE
Dropped — mid, Advisor	7	Dave	4 × / 14d	~620	LIVE
Dead referral Introduced, never converted — warmer context	8	Mel / Dave	3 × / 10d	130	LIVE
Post-event Attended, not in conversation	9	Mel / Dave	3 × / 7d	—	STAGED
Dropped — deep Left 5+ years ago — longer warm-up	10	Mel / Dave	longer	115	NEXT
Sponsor / Resource Partner	11	Dave / Kent	custom	23	NEXT

Highlighted rows are your Family Office lanes Live in production Staged / deferred On the roadmap

~2,150

total active pool across the live lanes — ~99.6% coverage in Batches 1 & 2

~1,246

dropped-mid prospects — the single biggest re-engagement opportunity

3

of your FO lanes are live today: Seq 1, 3 and 6 — plus half of dead-referral

ROUTING RULE — COUNTRY IS THE BOSS

Mel = United States + Single Family Offices (Family Office pipeline). **Dave** = US Advisor, Multi-Family Offices & partners. **Miguel** = anyone outside the US, regardless of segment. Country is authoritative — a non-US SFO still routes to Miguel.

04 / THE CADENCES

Every lane runs a deliberate rhythm.

Touch counts and intervals are fixed per segment — short and warm where there's history, longer where trust has to be rebuilt. Email-only in Outreach, always approval-required, one clear ask per message.

Dropped — recent SEQ 1 / 2 • MEL • DAVE

3 touches over 21 days

**Cold inbound** SEQ 3 / 4 • MEL • DAVE

3 touches over 14 days

**Dropped — mid** SEQ 6 / 7 • YOUR ~620 FO LIST

4 touches over 14 days

**Dead referral** SEQ 8 • MEL • DAVE

3 touches over 10 days — shorter, it's warmer

**READ THE TEMPO**

Warmer context earns a **shorter, faster** cadence (dead referral, 10 days). Colder or older relationships get **more touches and more room** to rebuild trust (dropped-mid, four touches). The pattern is never random — it's matched to how much goodwill already exists.

05 / TRUST & GUARDRAILS

Why re-engagement never embarrasses us.

Talking to someone who already knows FOX is high-risk: one wrong fact and the relationship is gone. Two mechanisms make that safe — an accuracy loop on every message, and hard gates that decide who never gets contacted.

MECHANISM 1

The accuracy loop

Non-optional for any email that references prior history.

- 1 **Draft on the record, not from thin air**
Grounded in the contact's real activity & deal history — never freeform.
- 2 **Run the AI accuracy check**
The draft is tested against what we actually know.
- 3 **Feed the result back**
"Ensure the email is as accurate as possible" — corrections applied.
- 4 **Confirmation pass**
A dedicated accuracy review before anything is staged.
- 5 **Manual send in Outreach**
Lands as a manual step — the rep reads it and sends.

"One hallucinated fact in a re-engagement torpedoed trust. This loop is non-optional."

FOX RevOps operating doctrine

MECHANISM 2

Stop-and-ask gates

Checked before enrollment **and** on every touch. If a gate trips, the prospect is held — not sent to.

-  **Unsubscribed or engine-excluded**
unsubscribed_globally or prospect_engine_excluded → **never enroll**
-  **Now a current member**
Route to the member side — out of prospecting entirely
-  **Contacted 3× this quarter**
reengagement_attempts_q ≥ 3 → **defer to next quarter** (the cooldown)
-  **8× this year**
reengagement_attempts_y ≥ 8 → surface for rep review
-  **Invalid or bouncing email**
Never enroll — routed to the data-fix queue
-  **Missing country, or dropped < 30 days**
Surfaced for a human decision, not auto-enrolled

LIVE HEALTH MONITORS

After a sequence activates, the engine watches the numbers and pulls back on its own: **bounce > 5%** → **pause**, **reply < 2%** → **revise the copy**, **opt-out > 2%** → **stop**. The system protects the sender reputation so your name stays clean.

06 / THE CAST

Software does the heavy lifting; people make the calls.

A conductor dispatches the work to four specialist agents. They find, clean, score and draft — then hand off to Jake to activate and to you to approve and send. No agent ever sends on its own.

The Conductor

fox-revops-orchestrator

Reads the request, classifies the work, and dispatches it to the right specialist. The single front door to the whole system.

The Router

inbound-processor

Takes a new lead from message → enrichment → CRM → Outreach, assigns the owner and stages the first reply against the time-to-first-touch SLA.

The Housekeeper

hubspot-hygiene

Keeps the CRM honest — flags deals stalling at 30 / 60 / 90 days and splits a book into **custom-email**, **sequence-only** and **hold** for re-engagement.

The Writer

sequence-writer

Designs the sequences and writes the copy through the accuracy loop — then **stages** it for Jake to activate. Never auto-activates, never freeforms.

THE HUMAN HANDOFF

Agents find, clean, score & draft →

Jake activates the sequence →

Mel / Dave / Miguel approve & send every email →

Prospect replies → rep takes the call

THE PIPELINE IT FEEDS

A positive reply enters the 8-stage pipeline at Discovery

Re-engagement doesn't replace the sales process — it **refills the top of it**, on autopilot, with people who already know FOX.

07 / WORKED EXAMPLE

ILLUSTRATIVE

One prospect, start to finish.

A single family office moving through the engine end to end. Names are composite — the mechanics are exactly what every FO prospect follows.

THE POINT

From a dormant record to a **warm discovery call in under two weeks** — no cold pitch, because they already know FOX. You touched it three times, all pre-drafted and fact-checked; the engine did everything else.

08 / THE CRAFT

How every email is written.

Two things earn the right to talk to someone who already knows FOX: it has to be accurate, and it has to sound like you. Both are enforced before anything reaches your queue.

THE RULES OF THE HOUSE

Enforced on every draft

- ✓ **One clear ask** per email — a single, low-friction next step
- ✓ **Grounded in the real record** — never an invented fact
- ✓ A **short, specific subject** line
- ✓ Signed **“Best Regards, Mel Simms”**
- ✗ No **“just checking in”** or **“circling back”**
- ✗ No **“pitch,” “sell,” “unlock value,” “synergy”**
- ✗ No exclamation points, no emojis

ANATOMY OF A FIRST TOUCH

ILLUSTRATIVE

To: **Principal, a family office**
From: **Mel Simms, FOX**
Subject: **What's changed at FOX since 2024**

When your family office stepped away from FOX in 2024, the peer network looked different than it does now.

Opens on the shared history, not “just checking in”

Two things are new that line up with what you were weighing then: a direct-investing peer group and the operating-family cohort.

One specific value angle, grounded in the record

Worth fifteen minutes to compare notes?

A single, low-friction ask

Best Regards,
Mel Simms

Your sign-off, applied automatically

IT ALWAYS SOUNDS LIKE THE RIGHT PERSON

Each rep has their own signature and rules, applied automatically: **Dave** signs “Best, Dave Blide”; **Miguel** writes in his voice and never includes a scheduling link. You never inherit someone else's style — and you always have the final edit.

What the back-book is worth.

A way to think about the upside, not a forecast. The pool and the 9% pipeline win rate are real; the middle conversion rates are yours to set. Re-engagement is already the #3 deal source with 134 live deals — this is that same motion at full coverage.

**134**

re-engage deals already live in the pipeline today

#3

deal source in 2026 — ahead of referral and event

\$544K

FO Membership won YTD — the value one new member carries

Set your own reply and conversion rates and the funnel recomputes. The point isn't the exact number — it's that a pool of **2,153 people who already know FOX** is being worked systematically for the first time, on top of everything inbound already delivers.

10 / THE TAKEAWAY

What this means for you, Mel.

Your lanes are live now

Cold inbound FO (Seq 3), dropped-recent FO (Seq 1), dropped-mid FO (Seq 6, your ~620) and half of dead-referral (Seq 8) are already running. Expect steady, personalized re-engagement emails staged for your approval.

You approve, you send

No email leaves under your name until you clear it. The engine drafts and accuracy-checks; you keep full editorial control and the final click. Send caps are off — you manage your own bandwidth.

The voice stays yours

House style is enforced: one clear ask, no “just checking in,” no “circling back,” no hype, no emojis. Sign-off stays **“Best Regards, Mel Simms.”**

A reply is a warm handoff

The moment someone responds positively, the cadence pauses and the deal opens at Discovery — it's yours to run. These are the warmest cold calls you'll make: they already know FOX.

THE ONE-LINE VERSION

A tireless engine that refills your pipeline with people who already raised their hand — and never sends a word without you.

- **2,153** prospects worked on purpose, not by luck
- **6 segments**, matched message & tempo per relationship
- **Accuracy loop** so we never get a fact wrong
- **134** re-engage deals already live in the pipeline
- **100%** rep-approved — a human clears every email
- **Your FO lanes** are running today
